

## **Calvary Healthcare**

*Strong focus on aged and palliative care.*

### **Project**

The project will bring together public and private health care providers with a major grouping of private sector eHealth vendors including market leaders such as, HCN, HealthLink, Smart Health Solutions and Precedence HealthCare. The project will test interoperability between solutions through the alignment to NEHTA specifications and national eHealth standards, including the core PCEHR foundations such as Healthcare Identifiers, Secure Message Delivery, Discharge Summaries and Health Summaries.

### **Demographics**

A potential cross-border population reach of approximately 800 000 consumers across the ACT and into regional NSW.

### **Approach**

By utilising existing eHealth solutions that are already deployed across the participating healthcare practices, it is expected that there will be a reduction in implementation complexities and time to market. Bringing together the above named leading private sector organisations to build sustainable solutions will support the national PCEHR initiative.
