

Brisbane South Division Limited

Will deliver a substantial PCEHR consumer footprint in one of Australia's major capital cities.

Project

Focusing on enrolling people with disabilities and their carers, war veterans and war widows, and children commencing school, the project will bring two Division's of General Practice onboard, Brisbane South and Ipswich & West Moreton, and public and private hospitals, allied health and GP's.

This project combined with the existing Wave 1 PCEHR projects at GPpartners and Queensland Health and the new Wave 2 Mater Hospital project, will showcase the benefits of a PCEHR on a large scale across Brisbane.

Demographics

A potential population reach of approximately 270 000 consumers in high growth, emerging communities in the Brisbane and Ipswich regions and when combined with GP Partners consumer reach, the PCEHR will provide coverage of the majority of the Brisbane region.

Approach

By using the Wave 1 PCEHR infrastructure, including common services, systems and program coordination there is expected to be a significant increase in value for money for both Wave 1 and 2 projects and reduce implementation complexity. Summary Health Profile, Discharge Summaries and Referrals to be part of the project.
