

FRED IT Group MedView Project

Towards a national medications repository

Project

The MedView project will demonstrate the ability of consumers and health professionals to access consented patient's medication history via a PCEHR conformant medicines repository using national electronic transfer of prescriptions and other standards and specifications.

This project aims to demonstrate how a national medications repository could function within the context of the national PCEHR.

The project will deploy MedView to all pharmacies and GP's in the GP Association of Geelong region, Barwon Health (Geelong Hospital) and a Residential Aged Care Facility as well as a further 10% of GPs and Pharmacies nationally. The project will bring together a grouping of private sector eHealth vendors including FRED, eRx, Best Practice, Zedmed, iCare, Simpl, Microsoft, Simple Retail, Pharmhos and Core Medical Solutions. The project will test interoperability between these solutions through the alignment to NEHTA specifications and national PCEHR standards.

Demographics

Population reach of approximately 2,000,000 – regional Victoria and other areas nationally.

Approach

This is the first time a project will provide a solution that will allow Australian clinicians, pharmacists, aged care facilities and hospitals to see a combined list of prescribed and dispensed medications regardless of how many different doctors and pharmacies the patient has attended.
